New England Energy News for May 29, 2015

In this week's energy news, the missing "and" in Maine is still making headlines since it means tens of millions of dollars in efficiency funds won't be available. The smallest state in the nation is wondering why their neighbors to the north will see lower electric rates this summer and they won't. And town officials in Plymouth, MA got schooled by UMass on what to expect when Pilgrim turns out its lights. The message: plan now and well in advance, because the economics aren't pretty. And, from the "No Surprises Here" department," a poll of NH residents shows that those most affected by either of two big energy projects, know more and like it less.

There are a lot more stories (too many to count) at neenergynews.com so swing by for a visit.

Have a great weekend.
